

Requirements Gathering Brief: "EventEase" App

• Mock Interview Summary

I conducted a 30-min mock interview with a fictional client, Community Life Group, an organization that frequently hosts local events.

The goal was to define requirements for EventEase an app that streamlines discovering, organizing and attending community events.

• Key Requirements Identified

- User Registration & Profiles:
 - Users create profiles, choose interests (e.g. sports, arts, volunteering).
- Event Creating & Management:
 - Organizations and individuals can create, edit, and manage event pages.
- Event Discovery & Search:
 - Users can browse and filter events by date, location, category or popularity.
- RSVP and Attendance:
 - User can RSVP, receive reminders and check in at events.
- Volunteer Sign-Up:
 - Event hosts can post volunteer opportunities, users can sign up within the app.
- Push Notification:
 - Personalized alerts for new events matching user interests.
- Calendar Integration:
 - Sync events directly with Google Calendar, Outlook or Apple Calendar.
- Accessibility Support:
 - High-contrast themes, screen reader compatibility, and adjustable font sizes.

• Documenting and Tracing Requirements

→ User Stories:

E.g.: "As a user, I want to browse events by location so I can attend nearby activities."

→ Requirements Traceability Matrix (RTM):

- Each requirements is linked to its respective design component, development task, and test case.

→ Prioritization:

- Requirement tagged as must-have, or Nice-to-have.

→ Change Management:

- Maintain a log to track evolving or new requirements post-interview.

• Conclusion

Effective requirements gathering builds a strong foundation for EventEase. By using user stories, traceability matrices and prioritization the app developments can stay focused, agile, and user-centered.
